

OpenMeetings

This is how it works:

- ⤴ You receive a mail with a link within.
- ⤴ You follow the link and this will log you into the web conference. In this process you can test your equipment and must allow the computer to start Flash.
- ⤴ When you have entered the meeting you can chat with others using the tool at the bottom right. To get your sound and camera in order you choose the Action-menu (top left corner) and then select the Camera and microphone.

What you need:

- ⤴ Have your webcam and headset inserted before following the link in the mail.
- ⤴ The Flash plug-in installed in your computer. (Most computers have this.)
- ⤴ If your connection to Internet is restricted, the Firewall needs to let traffic through on port 5080.
- ⤴ Support for sound.

To get the most out of it:

- ⤴ Web camera so other can see you.
- ⤴ Headset (choose usb connector if you have that opportunity)

To get support by phone:
